Assignment 1**

Theme:

Beauty / Make Up

Title:

Make Up Organization System

Submitted to:

PROF. MADYA DR. AZMAN B YASIN

Prepared by:

Muhammad Luqman Bin Ahmad Zamri (284495)

CONTENTS

1. Identify the problem
2. Understand the problem
3. Identify alternative ways to solve the problem
4. Select the best way to solve the problem from the list of alternative solutions
5. List instructions (steps) that enable you to solve the problem using the selected solution
6. Evaluate the solution
7. Algorithm
8. Pseudocode
9. Flow chart
10. Coding – Numerical computation & expression

1) Identify the problem:

Makeup lately are being used widely in society. Makeup is also important for those who attend certain events or events. Becomes a problem for those who do not have the skills or equipment of makeup. Many users have a desire or even a deep interest in makeup. However, judging from the disposition or development of this makeup activity, it is rather unattractive and gets less attention from social media. Among the services that are usually offered in the field of makeup is just the makeup services that are usually taken by brides, artists, or those who enter the performance activities. Perhaps many are still looking for alternatives and opportunities available that may be limited in terms of acceptance and time.

Not only that the skill of handling makeup tools and knowing the quantity and pressure required when makeup is also something very important. Lack of knowledge and knowledge about makeup makes a person less confident and does not dare to try to do makeup activities. This is undeniable because if viewed in terms of time, equipment and technique, all these aspects are scrutinized very well. This is because, all these aspects will affect the robustness, durability and also the softness of the makeup result itself.

Based on the observations on the website of makeup, in the view of an educator, many of the users are skilled and have a fairly extensive knowledge about them, some may even have a lot of experience and challenging in the field of makeup. Therefore, it becomes difficult for those who do not know or are deadlocked in finding a solution to further introduce this knowledge of makeup to the public. This is because, the lack of a platform or system that focuses on the science of cosmetology. They argue that this knowledge no longer needs to be expanded due to the development of technology which has led to the search for ways to use cosmetic equipment and knowledge. not only that, there are also among the teaching staff who have problems in financial management in managing makeup.

What is Make up?

Make-up or makeup may refer to cosmetics that is used in face-to-face interactions, theatrical makeup and renewing or restoring an interpersonal or intimate relationship. Cosmetics are made up of a variety of chemical substances taken from either natural or manufactured sources. Cosmetics serve a variety of functions. Cleanse and protect the body or skin using those developed for personal care and skin care. Makeup may be used to disguise imperfections, accentuate one's natural features (such as the eyebrows and eyelashes), add colour to a person's face, and even transform the look of the face totally to resemble a new person, creature, or item. Cosmetics may also be intended to give the body a pleasant scent.

Though most nations' legal definitions of cosmetics are wider, in certain Western countries, cosmetics are widely understood to refer exclusively to makeup goods like lipstick, mascara, eye shadow, foundation, blush, highlighter, bronzer, and a variety of other products.

Cleansers, toners, serums, moisturisers, and balms are examples of skin-care cosmetics that may be used to wash, exfoliate, and protect the skin while also renewing it. Shampoo and body wash, which are meant for more general personal care, may be used to cleanse the body.

Makeup can be used to conceal blemishes, enhance natural features (such as the eyebrows and eyelashes), add colour to a person's face, and—in the case of more extreme forms of makeup used for performances, fashion shows, and people in costume. It also can be used to completely transform the appearance of the face to resemble a different person, creature, or object. Contouring is a technique for modifying one's look that tries to sculpt a specific part of the face. Cosmetics may also be intended to give the body a pleasant scent.

History of Makeup

Cosmetics have been used by the ancient Egyptians and Sumerians for thousands of years. Cosmetic usage remained in Europe until the middle Ages where the face was whitened and the cheeks rouged. While views toward cosmetics changed over time, with cosmetic use being publicly frowned upon at numerous stages in Western history. Regardless of changes in societal views regarding cosmetics, many people were able to reach their ideals of look via the use of cosmetics on occasion.

Early notable advancements in cosmetics, according to one source, Ancient Egyptians used kohl, Castor oil was also utilised as a protective balm in ancient Egypt. In the nineteenth century, the Romans Vaseline and lanolin described skin treatments consisting of beeswax, olive oil, and rose water.

During this historical period, lack of control of cosmetic production and usage, as well as scientific understanding about the effects of different substances on the human body, resulted in deformities, blindness, and death. Cosmetics of the period were either chemically problematic or manufactured from natural substances like food colouring, berries and beetroot. The widespread use of harmful cosmetics such as ceruse (white lead) during the Renaissance in Europe and the mascara Lash Lure in the early twentieth century are two examples.

Throughout the 19th century, there were many incidents of lead poisoning from red and white lead cosmetics and powders, resulting in eye puffiness, teeth enamel damage, and skin discoloration, with prolonged use known to cause death. White lead was also used in Japan to make 'oshiroi', a white face paint. In the second part of the nineteenth century, cosmetics scientists developed makeup free of dangerous substances like lead.

In 1909, 'Eugène Schueller' founded L'Oréal, which is now owned by Lilliane Bettencourt (26%), Nestlé (28%), and the remaining 46% is publicly traded. Although most modern makeup is associated with women, an increasing number of males are using it to conceal or conceal facial flaws such as acne and dark circles, as well as using

eyeshadow, mascara, and lipstick. Males are increasingly being targeted by cosmetics makers, with certain things made specifically for men.

Types of Makeup

Cosmetics are meant to be applied externally and are used for a variety of purposes, including medical. These things may be used on the face, body, and hair. Depending on the manufacturer, cosmetics may be used for skincare, personal care, or changing one's look.

Primers are being use before applying makeup, they create a thin, smooth layer over the surface of the skin that allows cosmetics to be applied easily and evenly. Some primers are coloured, and the tint may either match or colour correct the wearer's skin tone, employing greens, oranges, and purples to balance out the skin tone and fix redness, purple shadows, or orange discoloration, respectively.

Concealer is a cream or liquid used to conceal scars or other flaws. Concealer is used after priming the face to level out the skin tone before applying foundation. For greater coverage, concealer is frequently thicker than foundation or tinted primers. A lighter concealer for the eyes, a heavier concealer for stage makeup, and colour correcting concealers meant to repair skin discolouration are also available.

Foundation is a cream, liquid, mousse, or powder product that is used to the whole face to achieve a smooth and even skin tone in the user. Foundation is offered in formulas that may give sheer, matte, dewy, or full coverage to the complexion, and it offers a lesser degree of coverage than concealer.

Rouge or blusher is a cream, liquid, mousse, or powder that is applied to the whole face to provide the user a smooth and even skin tone. Foundation comes in a variety of formulations that provide sheer, matte, dewy, or full coverage to the skin, and it provides less coverage than concealer.

Bronzer is a powder, cream, or liquid that adds colour to the skin, usually in bronze or tan colours, to give the skin a tanned look and to improve the colour of the face.

Bronzer, like highlighter, may include ingredients that provide a shimmer or glitter look, and is available in matte, semi-matte, satin, or shimmer finishes.

Highlighter is a substance that is applied to the high points of the face, such as the brows, nose, and cheekbones, as a liquid, cream, or powder. Often, chemicals are added to highlighter to give it a shimmer or glitter aspect. As an alternative, a highlighter may be made using a lighter-toned foundation or concealer.

Eyebrow are used to define, colour, and fill in the brows. [4] [10][11] Eyebrow tinting treatments may also be used to dye the hairs of the eyebrows a darker colour, either temporarily or permanently, without damaging or colouring the flesh underneath the brows.

Eyeshadow is a pigmented powder, cream, or liquid used to highlight, enhance, and modify the form of the region around the eyes, on the eyelid, and below the brows. Although liquid and cream formulations may be applied with the fingers, eyeshadow is traditionally applied using an eyeshadow brush with tiny, rounded bristles. Eyeshadow comes in practically every colour and a variety of textures, ranging from matte with light coverage to glossy, shimmering, sparkly, and highly pigmented. Many different colours and finishes of eyeshadow may be mixed together to generate distinct effects in one look.

Eyeliner is most typically black, it may also be brown, white, or blue. It is intended to accentuate and extend the apparent size or depth of the eye. Eyeliner is available as a pencil, a gel, or a liquid.

Mascara is the application of a viscous, cream-like substance applied with a spiral bristle mascara brush is used to darken, lengthen, thicken, or enhance the eyelashes. Mascara is typically black, brown, or transparent, however a variety of colours, some of which incorporate glitter, are available. Mascara is usually promoted and offered in a variety of formulas with attributes including waterproofing, volume enhancement, length enhancement, and curl enhancement, and may be used in conjunction with an eyelash curler to improve the natural curl of the eyelashes.

Lip products include *Lipstick, lip gloss, lip liner, and lip balms*. Lip cosmetics are often used to provide colour, texture, and moisture to the lips, as well as to define their exterior margins. Lipsticks and lip glosses, which give colour and texture to the lips, are generally available in a variety of colours and textures, including matte, satin, and glossy. Lip stains and other types of lip coloration products saturate the lips with a dye for a short period of time and usually do not change the structure of the lips. Both lip colour and lip liners may be applied straight to the lips, with a brush, or with the fingers, and are waterproof. Lip balms may colour the lips in addition to moisturising and protecting them (for example, by adding UV protection).

Face powder, setting powders and sprays are used to set foundation or concealer, giving it a matte or uniform appearance and covering tiny imperfections or blemishes. Both powders and setting sprays promise to prevent makeup from melting or seeping into the skin. While setting sprays are usually not coloured, setting powder and face powder may be tinted or translucent, and can be used to bake foundation so that it lasts longer on the face. Tinted face powders may be applied alone, without foundation or concealer, to provide a base with a very light coverage.

Nail polish is a nail colourant that is applied to the fingernails and toes. [4] Nail paints that are transparent and colourless may be used to strengthen nails or as a top or base layer to preserve the nail or nail polish. Nail polish, like eyeshadow, comes in a wide range of colours and styles.

2) Understand the problem:

Concern about the dissemination and development of cosmetic knowledge on social media or on the internet which is limited due to those who do not use or maximize the use of the internet and media. this can be seen because most of them still use old techniques and methods in conveying news, activities and developments of knowledge and the world of makeup. not only that, the increasing development in

the sale of makeup tools is also the cause of the lack of those who want to delve deeper into the knowledge of makeup.

For users or more focused on students which can be seen many of those who are interested in the field of makeup cannot focus and focus more on the knowledge of this makeup. This is because they spend a lot of time to focus on learning and daily activities. Time constraints are also a barrier for them.

3) Identify alternative ways to solve the problem

To solve this problem, there are several ways and alternatives that can be taken to those who are interested in knowing more in depth about makeup. This effort is carried out to students and the public.

1. Open a kiosk at Varsity mall UUM and launch the program about on the use of makeup.
2. Hire workers to handle customers in the kiosk.
3. Create a system for user and tutor.
4. Need to find any sources for makeup info and use.
5. Organize an event for student
6. Ask professional or expert makeup artist to make live in social media for makeup tutorial for once a week.

4) Select the best way to solve the problem from the list of alternative solutions.

Create a system where student and teaching staff or tutor can interact and grow their business

5) List instructions (steps) that enable you to solve the problem using the selected solution.

1. User log into the system.
2. User choose to enter as user or tutor
3. If user choose as a user, user need to enter their personal information such as name, age, gender and email
4. The name, price and the description of the makeup class will be displayed.
5. User need to choose their class and categories.
6. User need to insert their other personal info for confirmation
7. If user choose as a tutor, they will have three option
8. If user choose tutorial (T), user can get detail about calculation of makeup class or tutorial.
9. If user choose service(S), user must choose from 2 option
10. User insert number of customer from 2 option
11. User insert distance for makeup services
12. Result will be display
13. If user choose for rent makeup tool(R), user need to insert total day for set A and set B
14. Result will display for total profit.

USER	USER	USER	
USER	EYE	BASIC	RM 80
	FACE	INTERMEDIATE	RM 150
	LIPS	ADVANCE	RM 200
	FULL		
TUTOR	MAKEUP TUORIAL	<ul style="list-style-type: none"> • Calculate total profit • calculate discount 	
	MAKEUP SERVICES	<ul style="list-style-type: none"> • Calculate total services for light & heavy makeup • Calculate price for distance travel • Calculate total profit 	
	MAKEUP RENT	<ul style="list-style-type: none"> • Calculate total rent for set A and Set B • Calculate price for distance travel • Calculate total profit 	

Class Categories

BASIC	INTERMEDIATE	ADVANCE
8 hour class	10 hour class	12 hour class
Certificate on completion	Certificate on completion	Certificate on completion
1 -year tutorial video access	Lifetime tutorial video access	Lifetime tutorial video access
limited topic	full topic	full topic with additional notes
-	assist support	assist support
-	-	Access to tutor guide class
-	-	Able access tutor certificate
RM 80	RM 150	RM 200

Calculation:

Make Up Services	Calculation	
Makeup Tutorial	Calculation for discount for Student Registration	tutoprice = $80 - (80 * 20 / 100)$; tutoprice = $150 - (150 * 20 / 100)$; tutoprice = $200 - (200 * 20 / 100)$;
Makeup Service	Calculation for total customer that purchase for light and heavy makeup. Calculation for total price for total journey. Calculation for total price and profit.	totalight = $custlight * harga1$; totalheavy = $custheavy * harga2$; custsv = $custlight + custheavy$; totalsv = $totalight + totalheavy$; totalkm = $journeysv / 13$; totaljourney = $totalkm * 2.15$; totalprofit = $totalsv - totaljourney$;
Makeup Rent	Calculation for total makeup set that has been rent for Set A and set B	totalrent = $(rentA * 40) + (rentB * 80)$;

6) Evaluate The Solution

Through observation, the system can assist students or users in finding information and selecting the appropriate package. They are also able to develop talent as the system is available for support from instructors and is complete with guidance. The system also gives them the opportunity to upgrade from students to instructors with the certificates provided. Those who are use this system as instructors can make estimates and cost calculations for different services. This is somewhat helpful in managing their finances.

However, there are some shortcomings as the classes organized are online and this may affect the effectiveness in imparting the knowledge of makeup to students. those who are qualified are also entitled and qualified to have a certificate to become an instructor. in conclusion, high effort should be given from users and students so that this matter is beneficial for the future.

7) Algorithm

ALGORITHM

1. Choose either login as user or tutor
2. If user choose as a user, Insert user information
3. Systems will show the details about the class and package
4. User choose the package
5. user insert information for package
6. If user choose as a tutor, systems will show 3 option to choices for calculation
7. User insert the selection,
8. If User choose option 'Class tutorial", user need to insert class categories.
9. System will display result of price calculation

10. If user choose a service, user insert custheavy, custlight and journey.
11. Systems display calculation for total profit

12. If user choose rent, user insert setA, setB.
13. Systems display calculation for total profit

8) Pseudocode

Detail about the Make Up Class

There will be 3 structure or part of face that we will focus on Makeup session

- > EYE
- > FACE
- > LIP
- > FULL

We will provide class for each part and there are also have complete session for all part

For each part or structure, there will have 3 different categories :

- > BASIC
- > INTERMEDIATE
- > ADVANCE

Every part will have different class hour and different topic

BASIC	INTERMEDIATE	ADVANCE
8 hours class	10 hours class	12 hours class
Certificate on completion	Certificate on completion	Certificate on completion
1-year tutorial vid access	lifetime tutorial video access	lifetime tutorial video access
Limited topic	Full topic	Full topic with extra notes
-	Assist support	Assist support
-	-	Tutor guide class
-	-	Able access tutor certificate
RM 80	RM150	RM 200

P.S Purchasing any 2 advance class allow you to get Tutor Makeup Certificate

Please choose your class option

- EYE (E) -- FACE (F) -- LIPS (L) -- FULL (P) -

Insert your choice (Keyword) :

E

Please choose your class categories

- BASIC (B) -- INTERMEDIATE (I) -- ADVANCE (A) -

Insert your choice (Keyword) :

B

You are choosing class Eye and Basic categories

Total price = RM 80.0

Please insert your details below for final confirmation

SKIP 1013
INTRODUCTION TO PROGRAMMING
AND PROBLEM SOLVING
Group 1 (SEMSTER A211)
Assignment 1

Theme:

Beauty / Jewellery

Submitted to:

PROF. MADYA DR. AZMAN B YASIN

Prepared by:

Chong Pao Lun (284508)

A211 SKIP1013 GROUP A

ASSIGNMENT 1

1. Identify the problem

Jewelry, or trinkets, consists of decorative items used for personal ornaments such as brooches, rings, necklaces, earrings, pendants, bracelets, and cufflinks. Jewelry can be attached to the body or clothing. From a Western point of view, the term is limited to durable decorations, excluding flowers, for example. Metals such as gold, often combined with jewelry for centuries, have been a common material for jewelry making, but other materials such as shellfish and other plant materials may also be used. Trinkets One of the oldest types of archaeological remains The 100,000-year-old marble made from the shells of Nazariyah is considered the oldest decoration. The basic form of jewelry varies by culture, but is often very durable. In European culture, the most common form of navel decoration has survived from ancient times, but other forms, such as important decorations on the nose or ankles, are much less common in other cultures.

The word jewelery itself comes from the word jewel, which was translated from the Old French "jouel" into English, and the Latin word "jocale", which means toys. In British English, Indian English, New Zealand English, Irish English, Australian English, and South African English, it is written as a jewel, but the American English spelling is a jewel. Both are used in Canadian English, but the two jewelery on the shelves are the mainstream. In French and other European languages, the corresponding term joaillerie includes not only objects worn on the body, but also gorgeous metalwork made of precious metals such as art and church objects. Humans have used rings for a number of one in all a type reasons: functional, normally to recovery garb or hair in place, as a marker of social reputation and personal reputation, as with a wedding ring, as a signifier of some form of affiliation, whether or not or now no longer ethnic, religious or social, to provide talismanic protection (withinside the form of amulets), as an innovative display, as a carrier or photograph of personal meaning – inclusive of love, mourning, a non-public milestone or perhaps luck, superstition.

Renting, also known as hiring or letting, is a contract in which a fee is paid in exchange for the temporary use of another's item, service, or property. When a tenant signs a gross lease, the landlord pays all of the landlord's usual property charges. Renting equipment is one form of renting. The sharing economy might include renting.

There are some reasons to borrow rather than buy. Homes are tax deductible and tax deductible in most jurisdictions. Rent a house when you cannot afford to buy it because of your financial ability, such as "rent as needed." Reduce the financial risk associated with depreciation and operating expenses, especially for real estate that may be needed in the short term. When

is only needed temporarily (eg for special tools, trucks or skips). When traveling you may or may not own a car or bike, such as renting a car or bike, but need something that doesn't have a

nearby. You want a cheaper alternative to buying, such as renting a movie. Because the person is unwilling to pay the full price of the film, he rents the film at a lower price, but gives up the opportunity to watch it later. Tenants may shift the burden of building maintenance (mowing, snow removal, etc.) to the owner or his/her agent. No need to worry about service life and maintenance. Leases can lead to an imbalance in debt, which puts a strain on a company's balance sheet when purchasing real estate. Rentals are environmentally friendly when used more efficiently by maximizing their use without throwing away, overproducing or using the product. In addition to risk, leasing can provide the owner with regular income. The more departures (number of check-ins), the higher your income. Ultimately, rental income overlaps the purchase price of the product and an outflow that benefits the owner. Leases represent an alternative source of income for untapped inventory compared to an overreliance on, which is often stagnant or slow in the retail business environment.

A jewellery store (American English: jewelry store) is a retail business establishment, that specializes in selling (and also buying) jewellery and watches. Jewellery stores provide many services such as repairs, remodeling, restoring, designing and manufacturing pieces.

Currently, UUM university decided to open a new jewelry store on 1st January 2022, and all the products are imported from other countries. The main reason UUM opened a jewelry rent store is that that is no jewelry rent store in Kedah, and jewelry product is so expensive when buying. During the opening store, UUM found out that is some problems occurred during the processing of payment. First, the UUM rent store needs a lot of people to record and write a receipt in a long period time for the customer during the payment process, then during the process of writing a receipt, UUM found out that is some miscalculations occur and miswriting for the product and more. Thus, UUM decides to make a system which able to print out the information of the customer and the product list that customers rent. There is 4 type of jewelry which is Necklaces, Earrings, Charms, Ring. During the renting process, necklaces will be charged as RM50.5/per item, Earrings will be RM30.5/per item, Charms is RM70.0/per item, and Ring is RM80.0/per item. This product fee already includes the transfer fee, procedure fee, SST, and more. If that is the total quantity more than 5 , that will be a 2% discount for every product .When customers return back they will be charged a procedure fee and SST which is necklaces RM5.5/per item, Earrings will be RM3.5/per item, Charms is RM7.0/per item, and Ring is RM8.0/per item. If the date that has been borrowed is more than 5 date , that will be a extra 4% fee will be charged for every product item UUM rent stores decide to rent their jewelry only for VIP customers so that is a differentiation between the customer.

2. Understand the problem

For the case about that we know that the system will be only available for VIP customer due to secure. Then, that is the miscalculation and mis-record by the staff occur .Beside that, that will be a long time period for customer waiting to get the receipt. During the renting progress that will be two part which is total quantity more than 5 and less than 5. For total

quantity less than 5, that will be necklaces will be charged as RM50.5/per item, Earrings will be RM30.5/per item, Charms is RM70.0/per item, and Ring is RM80.0/per item. For total quantity more than 5, every item will be get 2% discount for each product necklaces will be charged as RM49.49/per item, Earrings will be RM29.89/per item, Charms is RM68.6/per item, and Ring is RM78.4/per item.

During returning progress that will be two part which is for date borrow more than 5 or less than 5. For the date less than 5 the price for necklaces RM5.5/per item, Earrings will be RM3.5/per item, Charms is RM7.0/per item, and Ring is RM8.0/per item. That will be 4% charged for every item borrow when the date is more than 5. Each the price for necklaces is RM5.72/per item, Earrings will be RM3.64/per item, Charms is RM7.28/per item, and Ring is RM8.32/per item. For the last part the customer will get a receipt when that is consist of the name, no.vip, address, phone, label number, name of item, type of product ,quantity of item, price of item, date of item, total price for each item and the total amount need to pay.

Case	Condition	Fomula

3. Identify alternative ways to solve the problem
 - Hire more people to written the receipt.
 - Hire more people to record the receipt.
 - Using calculator in calculation.
 - Double check the receipt and record correctly.
 - Identify whether the customer is VIP or not
 - Limited the number of customer.
 - Advice the worker to do more faster
 - Cutting worker break or rest time when their didn't finish their work.
 - Making all worker to do over time when job is not completed.
 - Making a system to do all the process of record, writing, calculation, and identify customer.

4. Select the best way to solve the problem from the list of alternative solutions.
 - Making a system to do all the process of record, writing, calculation, and identify customer.

5. List instructions (steps) that enable you to solve the problem using the selected solution.
 - Identify whether customer want to return jewellery
 - Taking customer personal detail
 - Insert the quantity, name and type of product that customer taken

- Making a calculation based on the item name, type and quantity product that customer need to pay
- Date(Punishment) and total quantity(discount) will be count if more than 5 that will be charge 4% and 2% per each.
- Print out a receipt or output for customer

Case	Condition	Fomula
Rent	quantity>5	$(price * quantity) - ((price * quantity) * 0.2)$
	necklaces	$(50.5 * quantity) - ((50.5 * quantity) * 0.2)$
	Earrings	$(30.5 * quantity) - ((30.5 * quantity) * 0.2)$
	Charms	$(70.0 * quantity) - ((70.0 * quantity) * 0.2)$
	Ring	$(80.0 * quantity) - ((80.0 * quantity) * 0.2)$

	Charms	$(7.0 * quantity)$
	Ring	$(8.0 * quantity)$

6. Evaluate the solution.

Renting Part

-First, inside the system, the system will declare the variable and initialized the variable. Example price1=50.5, price2=30.5, price3=70.0, price4=80.0. Then user need insert the input for name, matric, address, and phone. Next user will need to insert the name and quantity of product according to the type which is Necklaces, Chams, Rings, and Earrings for more total quantity less than 5. After that, that is calculation will be occur and the formula using is the product price = price * quantity. After all the calculation has been done the total amount is the sum of all four type product price. Last, the system will display back the customer information likes name, matric, address, phone, product type, product quantity, product price and total amount need to pay in the form of receipt .

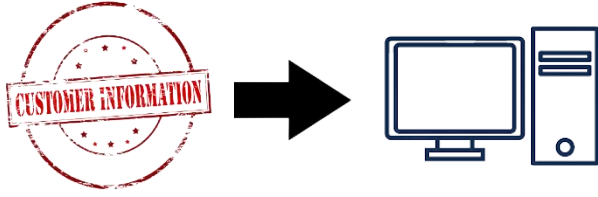

-Second, user will need to insert the name and quantity of product according to the type which is Necklaces, Chams, Rings, and Earrings for more total quantity more than 5. After that, that is calculation will be occur and the formula using is the product price = (price * quantity)-(price * quantity). *0.2). After all the calculation has been done the total amount is the sum of all four type product price. Last, the system will display back the customer information likes name, matric, address, phone, product type, product quantity, product price and total amount need to pay in the form of receipt .

Return Part

-First, inside the system, the system will declare the variable and initialized the variable. Example price1=5.5, price2=3.5, price3=7.0, price4=8.0. Then user need insert the input for name, matric, address, and phone. Next user will need to insert the name and quantity of product according to the type which is Necklaces, Chams, Rings, and Earrings for more total quantity less than 5. After that, that is calculation will be occur and the formula using is the product price = price * quantity. After all the calculation has been done the total amount is the sum of all four type product price. Last, the system will display back the customer information likes name, matric, address, phone, product type, product quantity, product price and total amount need to pay in the form of receipt .

-Second, user will need to insert the name and quantity of product according to the type which is Necklaces, Chams, Rings, and Earrings for more total quantity more than 5. After that, that is calculation will be occur and the formula using is the product price = (price * quantity)+(price * quantity). *0.4). After all the calculation has been done the total amount is the sum of all four type product price. Last, the system will display back the customer information likes name, matric, address, phone, product type, product quantity, product price and total amount need to pay in the form of receipt .

7. Algorithm

Step1:	<p>Initialized variable double price1=50.5, price2=30.5, price3=70.0, price4=80.0</p> 
Step2:	<p>Gather the information of customer(name,matric,phone,address)</p> 
Step3:	<p>User will need to insert the name and quantity of product according to the type which is Necklaces, Chams, Rings, and Earrings for less than 5 quantity.</p> 
Step4:	<p>Calculation for Necklaces arrayOfPrice1= price1 * arrayOfQuantity1;</p> 
Step5:	<p>Calculation for Earrings arrayOfPrice2= price2 * arrayOfQuantity2;</p> 
Step6:	<p>Calculation for Chams arrayOfPrice3= price3 * arrayOfQuantity3;</p> 

Step7:	<p>Calculation for Rings $\text{arrayOfPrice4} = \text{price4} * \text{arrayOfQuantity4}$;</p> 
Step8:	<p>Display a receipt for customer information (name,matric,phone,address) and the information product with the amount of total fee</p> 
	<p>User will need to insert the name and quantity of product according to the type which is Necklaces, Chams, Rings, and Earrings for more than 5 quantity.</p> 
	<p>Calculation for Necklaces $\text{arrayOfPrice1} = (\text{price1} * \text{arrayOfQuantity1}) - (\text{price1} * \text{arrayOfQuantity1}) * 0.2$;</p> 
	<p>Calculation for Earrings $\text{arrayOfPrice2} = (\text{price2} * \text{arrayOfQuantity2}) - (\text{price2} * \text{arrayOfQuantity2}) * 0.2$;</p> 

Calculation for Chams $\text{arrayOfPrice3} = (\text{price2} * \text{arrayOfQuantity2}) - (\text{price2} * \text{arrayOfQuantity2}) * 0.2;$

Calculation for Rings $\text{arrayOfPrice4} = (\text{price2} * \text{arrayOfQuantity2}) - (\text{price2} * \text{arrayOfQuantity2}) * 0.2;$

Display a receipt for customer information (name, matric, phone, address) and the information product with the amount of total fee

Step2: Gather the information of customer (name, matric, phone, address)

<p>Step3:</p>	<p>User will need to insert the name and quantity of product according to the type which is Necklaces, Chams, Rings, and Earrings for less than 5 date.</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  <p>× ?</p> </div> <div style="text-align: center;">  <p>× ?</p> </div> </div> <div style="display: flex; justify-content: space-around; align-items: center; margin-top: 20px;"> <div style="text-align: center;">  <p>× ?</p> </div> <div style="text-align: center;">  <p>× ?</p> </div> </div>
<p>Step4:</p>	<p>Calculation for Necklaces <code>arrayOfPrice1= price1 * arrayOfQuantity1;</code></p> <div style="text-align: right; margin-top: 20px;">  </div>
<p>Step5:</p>	<p>Calculation for Earrings <code>arrayOfPrice2= price2 * arrayOfQuantity2;</code></p> <div style="text-align: right; margin-top: 20px;">  </div>
<p>Step6:</p>	<p>Calculation for Chams <code>arrayOfPrice3= price3 * arrayOfQuantity3;</code></p> <div style="text-align: right; margin-top: 20px;">  </div>

Step7:

Calculation for Rings $arrayOfPrice4 = price4 * arrayOfQuantity4;$

Step8:

Display a receipt for customer information (name, matric, phone, address) and the information product with the amount of total fee

User will need to insert the name and quantity of product according to the type which is Necklaces, Chams, Rings, and Earrings for more than 5 date.

x ?

x ?

x ?

x ?

Calculation for Necklaces arrayOfPrice1= (price1 * arrayOfQuantity1)-(price1 * arrayOfQuantity1)*0.4);

Calculation for Earrings arrayOfPrice2= (price2 * arrayOfQuantity2)-(price2 * arrayOfQuantity2)*0.4);

Calculation for Chams arrayOfPrice3= (price2 * arrayOfQuantity2)-(price2 * arrayOfQuantity2)*0.4);

Calculation for Rings arrayOfPrice4= (price2 * arrayOfQuantity2)-(price2 * arrayOfQuantity2)*0.4);

Display a receipt for customer information (name,matric,phone,address) and the information product with the amount of total fee

8. Pseudocode

ASSIGNMENT 1

Name : Thivya Sri a/p Sivakumar

Matric no : 284594

Topic : Beauty

Subtopic : Perfume

Customized Organic Perfume Monthly Subscription

1. Identify the problem

Perfume is a mixture of fragrant essential oils or fragrances, fixatives and solvents, usually in liquid form. Ancient texts and archaeological excavations show the use of perfumes in some of the earliest human civilizations. Modern perfumery began in the late 19th century with the commercial synthesis of fragrance compounds. Two types of ingredients are used in perfume and they are natural (derived from plant materials) and synthetic (created through chemical synthesis).

Natural ingredients have been used since the beginning of perfumery. Various methods are used to extract and concentrate the fragrant parts into raw materials. Depending on the method of extraction, the resulting raw material will be an essential oil, absolute, or CO₂ extract. In the late 19th century perfumers began using synthetic ingredients, which allowed them to expand their palettes beyond natural oils and absolutes. With these materials perfumers can reinvent naturally occurring smells and create entirely new scents. Synthetic ingredients make up to 80% of many modern perfumes. Fragrances are made of raw materials that have different rates of evaporation. Raw materials are classified as top, middle or base notes according to their volatility. Most fragrances are built with a combination of top, middle and base notes to balance the fragrance as it evolves over time.

- Top notes (*high volatility + low tenacity—they evaporate the fastest*)

Top notes are the scents you detect first after spraying a perfume. Top notes usually evaporate quickly, remain for only the first five to fifteen minutes. Their main purpose is to give off an initial scent and then transition smoothly into the next part of the fragrance. As a result, top notes generally consist of lighter and smaller molecules.

- Middle notes (*intermediate volatility and tenacity*)

The middle notes or modifiers add complexity to a fragrance. Because they make up around 50 percent of the total scent, middle notes usually last longer than top notes. Middle notes appear as the top notes start to fade.

- Base notes (*low volatility + high tenacity—they last the longest*)

Base notes are what help the middle notes last longer. They accentuate and extend the longevity of the middle notes. Along with middle notes, base notes form the foundation of the fragrance. The base notes will determine the main characteristics of a fragrance.

Perfume products vary in price because they vary in strength and they are classified by strength as well. The fragrance concentration of a particular perfume refers to the fragrance's strength. The higher the concentration the purer the fragrance. It contains a greater amount of perfume oils therefore the cost of the fragrance is greater. Besides, the greater the concentration of perfume oils the longer the perfume lasts on the wearers which is usually referred to as tenacity.

Organic perfumes are better than synthetic perfumes. Organic perfumes are made from 100% naturally-sourced ingredients, usually plant-based, and extracted without chemical intervention. Organic perfumes do not contain ingredients grown with chemicals, pesticides or toxins, which can cause skin sensitivity and environmental damage. Organic perfumes are simply a better choice for our health and for the environment.

Customization is the action of making or changing something according to the buyer's or user's needs. It is also defined as to make or change something to personal or unique specifications. Personalized or customized perfumes is where customers can choose the ingredients they prefer and order the perfume. They can experience their favorite fragrance by choosing the ingredients from top note, middle note and base note.

From the UUM Hostel Management feedback, there are many unused perfumes that are thrown into the trash bins. Some students throw away the unused perfumes because certain fragrances causes health problems like migraines, headaches and respiratory difficulties. Different students have different level of fragrance sensitivity, so they need to use perfumes in which the ingredients suits them. Some students do not like synthetic perfumes and looking for organic perfumes that do not cause health problems. Some students throw away the unused perfumes because they do not like the readymade fragrance and prefer customized fragrance. Because of the large amount of perfume in a bottle, students unable to finish the perfume before the expiry date and some students throw away the old unused perfume after they change to the new one. The used perfume

bottles which are empty now are also thrown away and increases the amount of waste in the hostel area.

Besides, due to the longer distance from UUM to town, it is difficult for students to get the perfume each time when it has finishes or when the students want to change the perfume. So, students need to purchase the perfumes each and every time by going to the cosmetic shops or shopping malls. This increases the travelling cost of students and also the time taken to purchase it.

Because of this, the management plans to develop a system where students can get their customized organic perfumes every month with only one subscription. The users need to select the top, middle and base notes of the perfume, strength of the perfume and also the amount of perfume whether 10ml, 15ml or 20ml. That selected perfume will be delivered to the user every month. This reduces the wastage of unused perfumes where that amount of perfume is sufficient for 1 month. If the user desires to change the customized perfume for the following month, they can change it by selecting the 3 notes using the system. There will be discount provided with the exchange of empty perfume bottles from students. This reduces the wastage of empty perfume bottles.

2. Understand the problem

Some students throw away the unused perfumes because certain fragrances causes health problems. A person might have a fragrance sensitivity to certain odors that irritate the senses, causing allergy-like symptoms such as migraines, headaches and respiratory difficulties, when exposed to fragranced products. Some experts estimate that as many as 30% of all people may have sensitivities to certain odors. Besides, synthetic perfumes contains chemicals which might also cause health issues. Because of this, students throw away the unused perfumes if they face these types of health issues after using the perfume. Different students have different level of fragrance sensitivity. So, they need to select the ingredients used for making a customized perfume for them.

Students throw away the unused perfumes if they do not like or prefer the readymade fragrance. Perfumes that are no longer used become waste and thrown away into the trash bins. This increases the amount of waste in hostel area. Perfumes are considered as hazardous wastes. If there is still perfume in the bottle it is considered Household Hazardous Waste (HHW). Household hazardous waste (HHW) must not be included in curbside garbage, recycling collection, or poured down the drain. HHW, if not disposed of properly, can be harmful to people, animals and the environment. In addition, empty bottles of perfumes are also thrown away. It increases the amount of wastes when the used and empty perfume bottles are thrown away. The students prefer to use personalized or customized organic perfumes rather than readymade perfumes.

Students money is being waste for unused perfumes. Because they do not like the readymade fragrance, they do not use the perfume and purchase the other perfume. Besides, some students couldn't finish the perfume bottle before the expiry date. Because of the larger amount of perfume in a bottle, they couldn't finish it before expiry date and thus their money will be wasted

for that unused perfume. Because of this, students need accurate amount of perfume so that they can finish using the perfume before expiry date.

Students need to purchase every time when they desire to change the perfume or when it has finished by going to the shop. This increases the time taken of students to purchase the perfume. Travelling cost of students also increases because of the longer distance to purchase the perfumes.

Moreover, billing miscalculation might happen when calculating the price manually using calculator. The price of the organic perfumes is also higher. Basically, organic refers to any product whose ingredients are naturally grown without the use of any kind of artificial chemicals. That said, organic perfume is defined as any fragrance whose ingredients have been manufactured solely from natural products. Because of the natural ingredients, the price of organic perfume is higher compare to synthetic perfume.

3. Identify alternative ways to solve the problem

- Open a customized organic perfume kiosk in Varsity Mall, UUM.
- Students choose the customized perfumes by selecting the top notes, middle notes and base notes manually using forms.
- Hire workers to handle customers in the kiosk.
- Perfume subscription can be done manually using papers.
- Sell perfumes with accurate amount where customers can use the perfume for 1 month and without wasting.
- Students bring their used empty perfume bottles to the kiosk to get discount when purchasing new perfumes.
- Students need to purchase each time when the perfume has finished.
- Calculate the price of the perfumes using calculator.
- Create a system where each student can choose the top, middle and base notes for customized perfume, subscribe one time, receive the perfume of 10ml, 15ml or 20ml every month and enables students to select the 3 bases for customized perfume for the next month.

4. Select the best way to solve the problem from the list of alternative solutions.

Create a system where each student can choose the top, middle and base notes for customized perfume, subscribe one time, receive the perfume of 10ml, 15ml or 20ml every month and enables students to select the 3 bases for customized perfume for the next month.

5. List instructions (steps) that enable you to solve the problem using the selected solution.

- a. User log into the system.
- b. User need to enter their personal information such as name, ic number and phone number.

- c. The top, middle and base notes of the perfumes will be displayed.
- d. User need to choose the amount of perfume whether 10 ml, 15 ml or 20 ml.
- e. User need to choose the ingredients for top, middle and base notes of the perfumes.
- f. User choose the strength of each notes.
- g. User need to name the perfume as it is a customized perfume.
- h. User need to input the number of used empty perfume bottles if there is any to get discount.
- i. User need to input the location of delivery whether inside or outside campus and address (hostel name for UUM students).
- j. System will calculate the discount for the exchange of used perfume bottles.
- k. System will calculate the total price with delivery fees after deduct the discount.
- l. The price and item description will be displayed.
- m. User can change the type of perfume for next month using the system. If the user does not want to change, the same type of perfume will be delivered every month.
- n. User can pause or unsubscribe the plan if they choose to do so.

User need to choose one ingredient from top, one from middle and one from base notes. User also need to choose fragrance strength to make customized perfume.

Notes	Available Ingredients	Price for 10ml	Price for 15ml	Price for 20ml
Top Note	<ul style="list-style-type: none"> • Orange • Neroli • Lavender 	RM 3	RM 4.50	RM 6
Middle Note	<ul style="list-style-type: none"> • Chamomile • Geranium • Juniper 	RM 5	RM 7.50	RM 10
Base Note	<ul style="list-style-type: none"> • Cedar • Pine • Vetiver 	RM 2	RM 3	RM 4
	Total	RM 10	RM 15	RM 20

Table 1: Price of top note, middle note and base note for 10 ml, 15 ml and 20 ml

Price according to fragrance strength	Lower Strength	Medium Strength	Higher Strength
Top Note	1 * price of top note	2 * price of top note	3 * price of top note
Middle Note	1 * price of middle note	2 * price of middle note	3 * price of middle note
Base Note	1 * price of base note	2 * price of base note	3 * price of base note

Table 2: Price of top note, middle note and base note according to fragrance strength

Calculation :

	Inside Campus delivery	Outside Campus delivery
10 ml	<p>Delivery fee = RM 2</p> <p>Empty bottle discount = number of empty bottles * 0.05%</p> <p>10 ml Perfume price = fragrance strength top note + fragrance strength middle note + fragrance strength base note</p> <p>total = perfume price – empty bottle discount + delivery fee</p>	<p>Delivery fee = RM 4</p> <p>Empty bottle discount = number of empty bottles * 0.05%</p> <p>10 ml Perfume price = fragrance strength top note + fragrance strength middle note + fragrance strength base note</p> <p>total = perfume price – empty bottle discount + delivery fee</p>
15 ml	<p>Delivery fee = RM 2</p> <p>Empty bottle discount = number of empty bottles * 0.05%</p> <p>15 ml Perfume price = fragrance strength top note + fragrance strength middle note + fragrance strength base note</p> <p>total = perfume price – empty bottle discount + delivery fee</p>	<p>Delivery fee = RM 4</p> <p>Empty bottle discount = number of empty bottles * 0.05%</p> <p>15 ml Perfume price = fragrance strength top note + fragrance strength middle note + fragrance strength base note</p> <p>total = perfume price – empty bottle discount + delivery fee</p>
20 ml	<p>Delivery fee = RM 2</p> <p>Empty bottle discount = number of empty bottles * 0.05%</p> <p>20 ml Perfume price = fragrance strength top note + fragrance strength middle note + fragrance strength base note</p> <p>total = Perfume price – empty bottle discount + delivery fee</p>	<p>Delivery fee = RM 4</p> <p>Empty bottle discount = number of empty bottles * 0.05%</p> <p>20 ml Perfume price = fragrance strength top note + fragrance strength middle note + fragrance strength base note</p> <p>total = Perfume price – empty bottle discount + delivery fee</p>

Table 3 : Calculation of price for 10 ml, 15 ml and 20 ml

6. Evaluate the solution

By using this system, students can customize their perfume by choosing their favorite ingredients from top note, middle note and also base note. They also can customize the strength of each notes by

choosing lower strength, medium strength or higher strength. By choosing the ingredients for customized perfume, health problems like headache can be reduced. This is because, students can select the ingredients according to their fragrance sensitivity. Besides, students can get organic perfume with lower price. Organic perfumes are better than synthetic perfumes in term of health. By using the perfume monthly subscription system, the wastage of unused perfume and empty perfume bottles can be reduced. This system also helps students to reduce the amount of money wasted due to the unused perfume. This is because, 10 ml, 15 ml or 20 ml of perfume will be given to students each month after they have subscribed and it is sufficient for 1 month. They will get another perfume with the same amount for the next month without ordering. This reduces the wastage of perfumes that are no longer used. Users also can adjust the frequency of delivery with full flexibility. Users' next order will automatically be placed on the same order date next month. This system is flexible because users can change the type of perfume to be delivered in the following month. With this, they can experience different types of perfumes. They also can pause or unsubscribe the plan. There will be discount provided with the exchange of empty perfume bottles from students. This reduces the wastage of empty perfume bottles.

7. Algorithm

Step 1: Initialize variable for customer personal information, perfume notes and price

Step 2 : User enter personal information (Name, Ic Number, Phone Number, Address)

Step 3: The top, middle and base ingredients of perfumes and its price will be displayed

Step 4: User enter the size of perfume – 10 ml, 15 ml and 20 ml

MING XIANG

Step 5 : User choose their desired ingredients for top(30%), middle(50%) and base(20%) notes to make customize perfume.

Step 6: User choose the fragrance strength for each notes. (1- Low, 2- Medium, 3-High)

Step 7: System calculates price of the perfume according to notes and its strength
 $\text{pricetopnote} = \text{size} * 0.3 * \text{topNoteStr};$
 $\text{pricemiddlenote} = \text{size} * 0.5 * \text{midNoteStr};$
 $\text{pricebasenote} = \text{size} * 0.2 * \text{baseNoteStr};$

Step 8: User enter a name for the customized perfume

Step 9: User enter number of empty perfume bottles to get 5% discount for each

Step 10: User enter location of delivery (Inside UUM - RM 2, Outside UUM – RM 4) and address

Step 11: Calculation of discount for used perfume bottles
Empty bottle discount = number of empty bottles * 0.05%

Step 12: Calculation of total price with delivery fees after deduct the discount
total = product price – empty bottle discount + delivery fee

Step 13: System displays the item description

Step 14: System displays information about next month's plan.

SKIP 1013
INTRODUCTION TO PROGRAMMING
AND PROBLEM SOLVING
Group 1 (SEMSTER A211)
Assignment 1

Theme :

Beauty / Skin Care

Title :

Skin Care Consultancy System

Submitted to :

PROF. MADYA DR. AZMAN B YASIN

Prepared by :

William Ng Wei Yi (284613)

A211 SKIP1013 GROUP A

ASSIGNMENT 1

1. Identify problem

From the feedback from the department of student community, due to the location of UUM university is deviate from city, which is bring a lot of inconvenient for the student to reach the hospital, pharmacy, shopping mall to get the skin care consultancy for the advice of chemical skin care product that is suitable or certified of product. Because of this the management department of university decided to create a system at for the Unit of Hospitality to helps student get the basic skin care consultancy to overcome the issue of consuming time to travel to the city area and the basic chemical certified of skin product that suitable for specific skin problem. The system mainly functions to provide the basic consultancy of student skin problem to provide solution and to check the contain of chemical percentage for their skin care product which is suitable to solve the user skin problem. This system able to let user to choose based on their symptoms they facing to print out the category of the skin problem which can be Oily skin, Dry Skin, Mixed Skin, and Sensitive Skin. Based on the category the system will provide the calculation of skin care product which required input of the product in (g)gram and the chemical contain to calculate the most suitable percentage for the skin problem $((\text{chemical}/\text{weight of product}) * 100\%)$ if more than 10% the product is not certified and not suitable for the skin problem. The consultancy system will be replacing the handwriting to avoid any human mistake and minimize the manpower and the budget hired more professional staff to check the chemical contain and provide the basic consultancy advice. Due to the covid 19, user able to get the basic consultancy by the system without any physical contact.

What is Skin ?

Skin is a layer of usually soft, flexible exterior tissue that covers a vertebrate animal's body and has three primary functions: protection, regulation, and feeling.

All mammals have some hair on their skin, even marine mammals like whales, dolphins, and porpoises that appear to be hairless. The skin interfaces with the environment and is the first line of defence from external factors.

The exoskeleton of arthropods, for example, has a different developmental origin, structure, and chemical makeup than other animal coverings. The adjective cutaneous (from Latin cutis' skin') implies "of the skin." The skin is an integumentary system organ in animals that is made up of numerous layers of ectodermal tissue that protects the underlying muscles, bones, ligaments, and internal organs. Amphibians, reptiles, and birds all have distinct types of skin. Extra skeletal apparatus such as bovid (cattle) and rhino horns, cervid antlers, giraffid nosecones, armadillos' osteoderm, and os penis/os clitoridis' skin (containing cutaneous and subcutaneous tissues) play critical roles in the formation, structure, and function.

What is Skin Care?

Skin care encompasses a variety of procedures that help to maintain the integrity of the skin, improve its appearance, and alleviate skin disorders. They can include proper nutrition, avoiding excessive sun exposure, and using emollients appropriately. Cosmetics, botulinum toxin, exfoliation, fillers, laser resurfacing, microdermabrasion, peels, retinol therapy, and ultrasonic skin treatment are all methods for improving appearance. In many situations, such as skin that is either excessively dry or too wet, dermatitis prevention, and skin injury prevention, skin care is a typical daily activity.

Wound healing, radiation therapy, and some drugs all include skin care as part of the treatment.

Background of the Skin Care

Skin care is at the interface and one of the daily essential at between the cosmetics and dermatology.

Cosmetics are defined by the US Federal Food, Drug, and Cosmetic Act as products that are used to cleanse or beautify the skin (for instance, shampoos and lipstick). Although some products, such as moisturizing sunscreens and anti-dandruff shampoos, are regulated under both categories, medications that are intended to diagnose, cure, mitigate, treat, or prevent disease or to affect the structure or function of the body (for example, sunscreens and acne creams) have their own category. Individual behaviours, as well as environmental and working settings, are all factors in skin care.

There is a plethora of products on the market that cater to oily, dry, or sensitive skin types, but how can you know which one you have?

Dr. Leslie Baumann, dermatologist, and author of "The Skin Type Solution," told TODAY Style in an email, "Most individuals... are wrong when they guess their skin type." "They are completely mistaken regarding whether they have oily or dry skin, as well as whether or not they have sensitive skin."

It's especially difficult to determine your true skin type because it changes over time and is influenced by factors such as climate, hormones, and diet. (There's also considerable controversy about whether "regular" and "sensitive" skin are indeed skin types.)

Dermatologists offer information on how to determine your skin type, as well as skin care treatments and cleanser and moisturiser recommendations for each.

2. Understand the problem

Due to a distance issue, students are unable to receive skin care consultation. The user cannot afford the huge amount of to travel fee to the store or pharmacy, which is located in the city. The user is unable to pinpoint the source of their skin problem. The university aims to keep the unit's hospitality budget as low as possible. Because of the covid 19, any consultation must avoid physical contact. Student users are unsure of the chemical percentages that are appropriate for their skin problems. The percentage of chemical skin care products that are certified is unknown to the student. The handwriting of consultant advice can be caused the mistake by humans. A large budget is required. Different skin care products have varying chemical content percentages. (Chemicals contain in gram(g) /Product net weight in gram(g)) *100%), If the percentage is greater than 10%, the test is considered a failure. Passing all three chemical contain tests equals a recognized product that is best for skin problems.

Eventually, the goal to having a system is to automate and systemize of the work in order to improving the minimize the budget and also the system able to ready to support and provide the service for the user 24/7 whenever they are facing any skin problem and also the risk of having the suitable also need to be attention for the specific skin problem which may having the huge negative impact to their health and skin. Based on the research for to solved the problem as below;

Four Major Skin Problem & Symptoms Chemical Contain

1. Oily Skin

Natural oils are secreted by the skin to keep it hydrated, but for oily skin, this process can go into overdrive, especially if the pores are wide. This can translate to an oily film on your face throughout the day, as well as frequent breakouts. If you have oily skin, stay away from heavy lotions and moisturizers. However, this does not negate the importance of hydration. Every Skin care contain the certain chemical for treating and balancing our skin compatibility to achieve the best result. However, the more of chemical contain doesn't mean it can help to improving the result more efficiency so the suitable chemical contain percentage in the skin care is very important for the best result of treatment.

The Oily Skin individual facing the symptoms as :	Recommended Chemical Contain for Oily Skin
<ul style="list-style-type: none"> • a shiny or greasy appearance. • very large or obvious pores on the skin. • skin that looks thick or rough. • Occasional persistent pimples. • clogged pores and blackheads. 	<ul style="list-style-type: none"> • Alcohol (g) • Glycogen(g) • Zinc Sulfate(g)

Table 1.0 Oily Skin

2. Dry Skin

Since it's commonly covered in a layer of dead skin cells, dry skin seems drab. Light reflects in all directions off these rough skin cells, whereas hydrated skin has a smooth surface that reflects light equally, making it appear more radiant. Many factors can lead to dry skin, including sun exposure, hot showers, and over-exfoliating with products like salicylic or glycolic acid. However, if you have dry skin, the most crucial thing you can do is stay hydrated. Avoiding very hot showers and steering clear of products containing detergents or sulfates, which can irritate the skin. Every Skin care contain the certain chemical for treating and balancing our skin compatibility to achieve the best result. However, the more of chemical contain doesn't mean it can help to improving the result more efficiency, so the suitable chemical contain percentage in the skin care is very important for the best result of treatment.

The Dry Skin individual facing symptoms as below :	Recommended Chemical Contain for Oily Skin
<ul style="list-style-type: none"> • Dehydration • Flakes, rough texture • Cracks in the skin • Itch • Skin feels painful, may sting or burning 	<ul style="list-style-type: none"> • Alcohol (g) • Sucrose (g) • Magnesium Sulfate (g)

Table 1.1 Dry Skin

3. Mix / Combination Skin

Combination skin lacks a common description, and some physicians believe it isn't a legitimate skin type like oily or dry. Seasonal changes in skin type are possible. In the winter, you'll be dry, and in the summer, you'll be greasy. Some people misunderstand it to mean oily in the T-zone, although this is a skin type that is categorized as oily. If your T-zone is oilier than the rest of your face, Day suggests applying a cream designed for oily skin only on those regions. Every Skin care contain the certain chemical for treating and balancing our skin compatibility to achieve the best result. However, the more of chemical contain doesn't mean it can help to improving the result more efficiency, so the suitable chemical contain percentage in the skin care is very important for the best result of treatment.

The Mix Skin individual facing symptoms as below :	Recommended Chemical Contain for Oily Skin
<ul style="list-style-type: none"> • Having the oily and dry skin spots • Experience Mild breakouts and dryness at the same time • Have larger pore on nose, chin, and forehead • Skin get oilier in summer, drier in winter 	<ul style="list-style-type: none"> • Alcohol (g) • Glucoside (g) • Sodium Sulphate (g)

Table 1.2 Mix/Combination Skin

4. Sensitive Skin

"Sensitive skin is skin prone to inflammation,". Acne, rosacea, and contact dermatitis, a type of red, itchy rash, are common in people with sensitive skin. Those with sensitive skin are more likely to experience stinging or burning. People with sensitive skin may have allergic

reactions to particular substances, so they should avoid using extremely harsh compounds in any aesthetic items they use, including skin care. People with acne, for example, should avoid isopropyl myristate, a common chemical in hair conditioners. Every Skin care contain the certain chemical for treating and balancing our skin compatibility to achieve the best result. However, the more of chemical contain doesn't mean it can help to improving the result more efficiency, so the suitable chemical contain percentage in the skin care is very important for the best result of treatment.

The Sensitive Skin individual facing symptoms as below :	Recommended Chemical Contain for Oily Skin
<ul style="list-style-type: none"> • Your Skin is itchy • You Feel Stinging and burning • Your Skin is dry • Get sunburn easily 	<ul style="list-style-type: none"> • Alcohol (g) • Perfume serum (g) • Potassium Sulphate (g)

Table 1.3 Sensitive Skin

3. Identify alternative ways to solve problem
 - The campus pharmacy provides the physical consultancy
 - Using the handwriting to provide the information of skin care consultancy and information
 - Needed a lot of related professionals in campus pharmacy to give the skin care consultancy
 - Provide the physical paper to let user filled the information of the skin problem and calculate for the chemical of skin care product
 - All consultant information record in physical paper by handwritten
 - Staff need to be working 24/7 to always standby for providing support
 - Increase budget to hire more staff to handle physical working
 - Double checking needs to done for second confirmation
 - Create system to automate all the info of skin care consultancy, calculation for chemical contain.
 - System automates to check the certified product and the most suitable product for user.

4. Select the best way to solve the problem from the list of alternative solutions
 - Create system to automate all the info of skin care consultancy, calculation for chemical contain.
 - System automates to check the certified product and the most suitable product for user.

5. List instructions (steps) that enable you to solve the problem using the selected solution
 - Key in user information
 - Based on the symptoms of skin problem facing by the user key in the group of skin problem
 - System will print the consultancy advice and solution for their skin problem

- Based on the skin problem system required the input of net weight of the product in gram(g)
- Key in Product name
- Key in the 3/3 type of chemical contain of the product in gram(g)
- Chemical contain percentage = (Chemicals contain in gram(g) /Product net weight in gram(g)) *100% ,If the percentage >= 10% : “The chemical contain is too high !”
- Pass the 3/3 chemical percentage = Certified product, most suitable, highly recommended
- Pass 2/3 chemical percentage = Certified product, least suitable
- Pass 1/3 chemical percentage = NOT certified product, NOT suitable
- Pass 0/3 Chemical percentage = NOT Certified product, DO NOT USE !
- Print out all the skin care consultancy information and the product chemical contain and the certified of the skin care product

Type of Symptoms Based on the symptoms key in the numeric number to identify and category the type of skin problem	Consultancy/Advice of solution Print in “String”	Percentage of Chemical Contain In gram(g) (Percentage>=10%): failed
Group ('1') Oily Skin <ul style="list-style-type: none"> • a shiny or greasy appearance. • very large or obvious pores on the skin. • skin that looks thick or rough. • Occasional persistent pimples. • clogged pores and blackheads. 	<ul style="list-style-type: none"> • Important of hydration Oiliness does not mean that your face is hydrated. All skin types need hydration. This helps to balance them, as well as maintain their natural characteristics and protective barriers. • Make intelligent choices in your diet. The better you eat, the more beautiful your skin. Avoid fatty and fried foods because this can increase oiliness and the incidence of pimples. To help control the oiliness, it is also best to limit yourself to one drink a night and eating spicy foods no more than once a week. Include more carrots, cantaloupe, and spinach in your meal - high in vitamin A and can slow oil production. 	<ol style="list-style-type: none"> 1. Input for the product name 2. Required input the net weight of the skin care product in gram(g) 3. Input for Chemical contain in gram(g) <ul style="list-style-type: none"> • Alcohol (g) • Glycogen (g) • Zinc Sulfate (g) <p>(Chemical weight(g)/product net weight(g))*100</p>
Group ('2') Dry Skin <ul style="list-style-type: none"> • Dehydration • Flakes, rough texture • Cracks in the skin • Itch • Skin feels painful, may sting or burning 	<ul style="list-style-type: none"> • Moisturize Moisturizers provide a seal over your skin to keep water from escaping. Apply moisturizer several times a day and after bathing. • Use warm water and limit bath time. Long showers or baths and hot water remove oils from your skin. Limit your bath or shower to five to 	<ol style="list-style-type: none"> 1. Input for the product name 2. Required input the net weight of the skin care product in gram(g) 3. Input for Chemical contain in gram(g) <ul style="list-style-type: none"> • Alcohol (g) • Sucrose (g)

	<p>10 minutes and use warm, not hot, water.</p> <ul style="list-style-type: none"> Avoid harsh, drying soaps. It's best to use cleansing creams or gentle skin cleansers and bath or shower gels with added moisturizers. Choose mild soaps that have added oils and fats. Avoid deodorant and antibacterial detergents, fragrance, and alcohol. 	<ul style="list-style-type: none"> Magnesium Sulfate (g) <p>$(\text{Chemical weight(g)}/\text{product net weight(g)}) * 100$</p>
<p>Group ('3') Mix Skin/Combination skin</p> <ul style="list-style-type: none"> Having the oily and dry skin spots Experience Mild breakouts and dryness at the same time Have larger pore on nose, chin, and forehead Skin get oilier in summer, drier in winter 	<ul style="list-style-type: none"> Use the gentle facial cleanser Your skin's surface becomes covered with dirt, excess oils, and impurities throughout the day. Make sure to use a facial cleanser that will help mattify your oily T-zone without over-drying your cheeks and under-eye area. Hydrate your skin Regardless of your skin type, using a moisturizer is essential to keep your skin looking and feeling healthy. For combination skin, your best bet is to opt for a moisturizer that's hydrating while not feeling heavy or greasy. 	<ol style="list-style-type: none"> Input for the product name Required input the net weight of the skin care product in gram(g) Input for Chemical contain in gram(g) <ul style="list-style-type: none"> Alcohol (g) Glucoside (g) Sodium Sulfate (g) <p>$(\text{Chemical weight(g)}/\text{product net weight(g)}) * 100$</p>
<p>Group ('4') Sensitive Skin</p> <ul style="list-style-type: none"> Your Skin is itchy You Feel Stinging and burning Your Skin is dry Get sunburn easily 	<ul style="list-style-type: none"> Cleanse your skin with micellar water. When it comes to sensitive skin, it's a good idea to stay away from foaming cleansers. Instead, try micellar water, a gentle, no-rinse cleansing option. Micellar water is powered by tiny micelles Never skip out on moisturizer. While you may be nervous about layering on extra skin care products if you have sensitive skin, skipping out on moisturizer shouldn't be an option. Lightweight cream helps strengthen and repair skin barrier to help resist visible signs of aging that a weakened barrier can accentuate. 	<ol style="list-style-type: none"> Input for the product name Required input the net weight of the skin care product in gram(g) Input for Chemical contain in gram(g) <ul style="list-style-type: none"> Alcohol (g) Perfume serum (g) Potassium Sulfate (g) <p>$(\text{Chemical weight(g)}/\text{product net weight(g)}) * 100$</p>

Table 2.0 Categorize Skin Care Problem and Product Chemical Percentage

Calculation and condition table

Chemical Percentage Contain Calculation and Certified Product	
Chemical percentage	$(\text{Chemical weight(g)}/\text{product net weight(g)}) * 100;$ <ol style="list-style-type: none"> Chemical 1 = $((\text{chemical_weight}/\text{product_weight}) * 100) = xx\%$; Chemical 3 = $((\text{chemical_weight}/\text{product_weight}) * 100) = xx\%$; Chemical 3 = $((\text{chemical_weight}/\text{product_weight}) * 100) = xx\%$;
Condition	<ul style="list-style-type: none"> If chemical (%) > 10% : "The chemical contain is too high !" 3/3 : (c1<10 && c2<10 && c3<10); 0/3 : (c1>10 && c2>10 && c3>10); 1/3 : (c1<10 2<10 c3<10);

Table 2.1 Total and Discount Calculation

6. Evaluate the solution

By using this Skin care consultant system able to help the University to decrease the budget in hired the professional to work on duty. This system also helps to minimize the manpower in the unit of hospitality in UUM. The 7/24 system always ready to provide consultancy service whenever student face the skin problem and quickly let student identify the skin problem and using the specific product to treat their skin problem. All the human mistakes also can be avoided since the system can calculate the chemical percentage calculation automate. The system initialized with the chemical condition to helps to make the certified and the most suitable product for the user in order to let user use the safe product from the market. To system allows user to insert the weight of the product and the weight of the chemical of the product to certified to product when every single percentage of chemical is less than 10%. All physical handwriting can be avoided with the consultancy information was develop in

the system. Due to the covid 19, all basic consultancy and avoid the face-to-face service minimize the chance of infection covid-19.

Firstly, the system required the user personal information as name, matric number, phone number, email address, and the system print again which input from the user for the second confirmation of the user personal information. Secondly, based on the symptoms the system will print the type of the skin problem and the consultancy advise for the user skin problem. At this phase system required input from user for the name of product and the net weight of the product. User key in the weight of the chemical contain for the each of the chemical contain in the product in gram(g). To calculate the percentage of chemical contain $((\text{chemical_weight}/\text{product_weight}) * 100) = xx\%$; The system will print the result of user personal information, product name, product net weight and the calculation result of chemical contain in percentage (%).

The certified product rules are also print at the end of the program to aware user the percentage (%) of chemical in the product below 10% is better to pass the certified and according to the rules to identify the certified of the product. In the three types of chemical if 3 of them are below than 10% the product is a certified product, most suitable, highly recommended. If 2 of the chemical percentage below than 10% the product is a certified product, least suitable. If only 1 of the chemical percentage below than 10%, the product is Not a certified product, Not Suitable! If all of them is higher than 10% of chemical percentage, the product is not a certified product, Do Not Use! By the rules user can easily identify and check how safe to use the skin care product for their skin treatment and daily skin care essential.

7. Algorithm

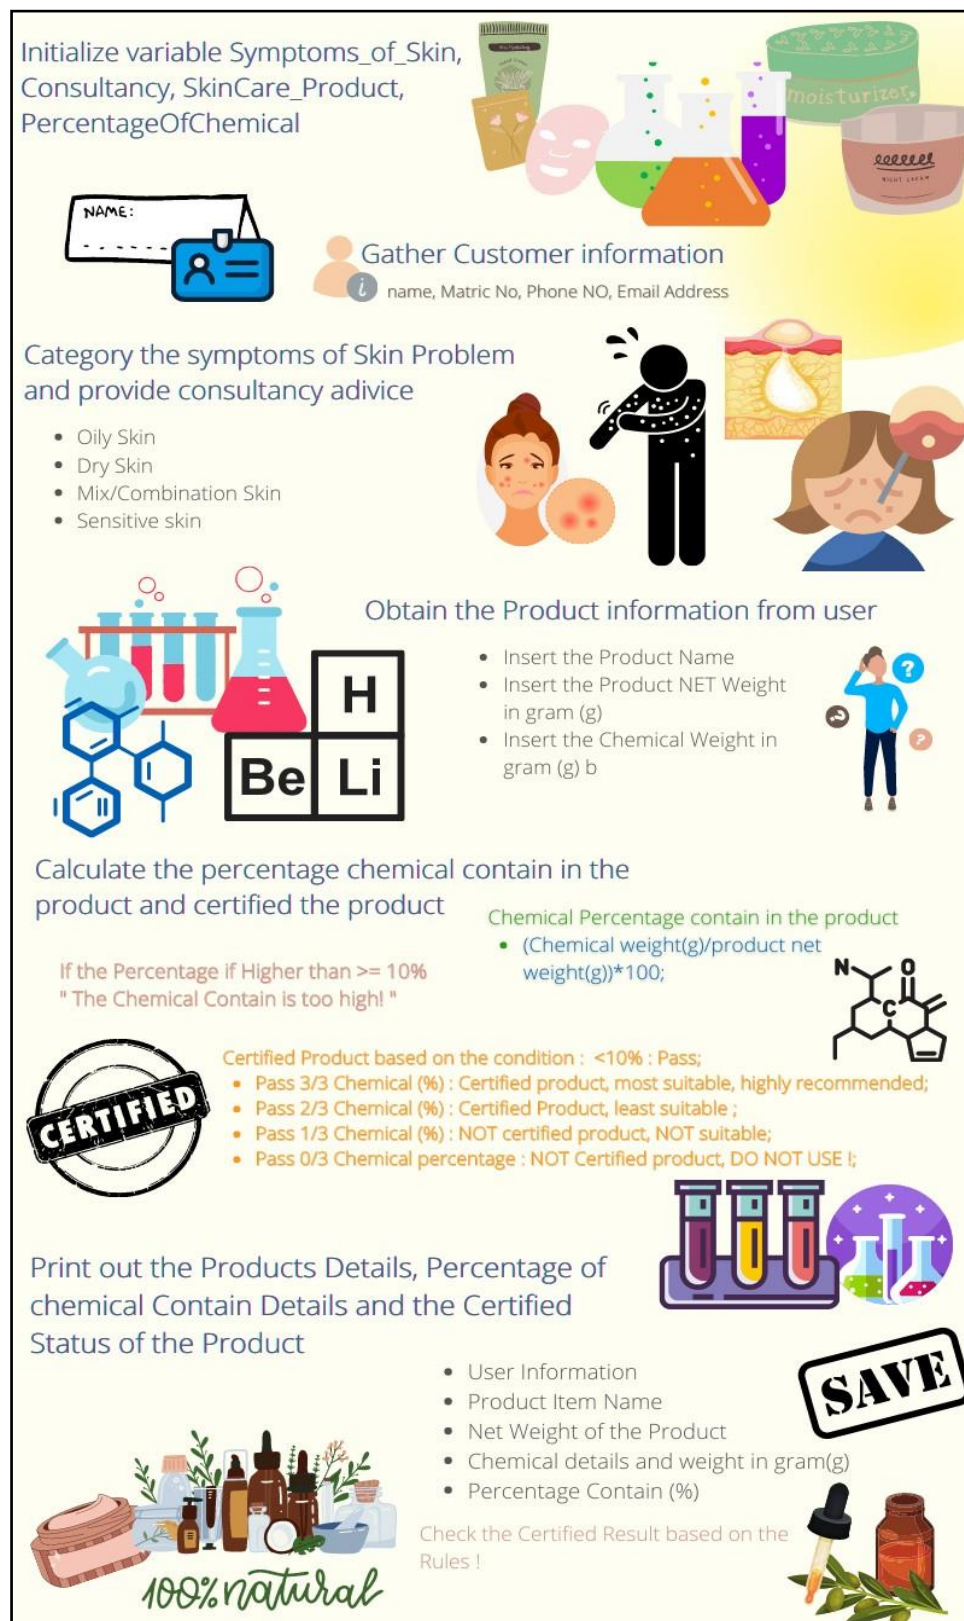

Figure 1.0 Algorithm

8. Pseudo code

- Problem 1: System provide the basic skin care consultancy and advice based on the skin problem symptom.
- Problem 2 : Obtain the skin care product information, net weight of product, chemical weight of the product
- Problem 3 : Calculate chemical percentage of the product and certified the product based on the rules.

Welcome to UUM SKIN CARE CONSULTANCY SYSTEM

Please insert your name : **william**
Please enter your Matric NO. : **123456**
Please insert your phone number : **0183546464**
Please insert email address : **william@uum.com**

Hi william Welcome to UUM SKIN CARE CONSULTANCY SYSTEM !
Please check your information shown as below :
Matric NO : 123456
Phone Number : 0183546464
Email Address : william@uum.com

DO YOU ENCOUNTER THE SKIN PROBLEM AS BELOW :

Group '1' Oily Skin

Symptoms of the Oily Skin as :

- a) A shiny or greasy appearance.
- b) Very large or obvious pores on the skin.
- c) Skin that looks thick or rough
- d) Occasional persistent pimples.
- e) Clogged pores and blackheads.

The Skin care Consultancy advise for your Skin Problem :

- Important of hydration
Oiliness does not mean that your face is hydrated. All skin types need hydration. This helps to balance them, as well as maintain their natural characteristics and protective barriers.
- Make intelligent choices in your diet.
The better you eat, the more beautiful your skin. Avoid fatty and fried foods because this can increase oiliness and the incidence of pimples.
Include more carrots, cantaloupe, and spinach in your meal - high in vitamin A and can actually slow oil production.

Check the chemical contain in your Skin care product Here

Please enter the Skin Care product name : **Laneigh**
Please Enter the NET Weight of the product in gram(g) : **500**
Please enter the chemical contain in gram(g) :
1. Alcohol (g) : **51**
2. Glycogen (g) : **50**
3. Zinc Sulfate (g) : **53**

Group '2' Dry Skin

Sypmtoms of the Dry Skin as :

- a) Dehydration
- b) Flakes, rough, texture
- c) Cracks in the skin
- d) Itch
- e) Skin feels painful, may sting or burning

The Skin care Consultancy advise for your Skin Problem :

- Moisturize
Moisturizers provide a seal over your skin to keep water from escaping. Apply moisturizer several times a day and after bathing.
- Use warm water and limit bath time.
Long showers or baths and hot water remove oils from your skin. Limit your bath or shower to five to 10 minutes and use warm, not hot, water.
- Avoid harsh, drying soaps.
It's best to use cleansing creams or gentle skin cleansers and bath or shower gels with added moisturizers. Choose mild soaps that have added oils and fats.
Avoid deodorant and antibacterial detergents, fragrance, and alcohol.

Check the chemical contain in your Skin care product Here

Please enter the Skin Care product name : [Innisfree](#)

Please Enter the NET Weight of the product in gram(g) : 300

Please enter the chemical contain in gram(g) :

1. Alcohol (g) : 23
2. Surcose (g) : 12
3. Magnesium Sulfate (g) : 16

Group '3' Mix/Combination Skin

Sypmtoms of the Mix Skin as :

- a) Having the oily and dry skin spots
- b) Experience Mild breakouts and dryness at the same time
- c) Have larger pore on nose, chin, and forehead
- d) Skin get oiler in summer, drier in winter

The Skin care Consultancy advise for your Skin Problem :

- Use the gentle facial cleanser
Your skin's surface becomes covered with dirt, excess oils, and impurities throughout the day. Make sure to use a facial cleanser that will help mattify your oily T-zone without over-drying your cheeks and under-eye area.
- Hydrate your skin.

Regardless of your skin type, using a moisturizer is essential to keep your skin looking and feeling healthy.

For combination skin, your best bet is to opt for a moisturizer that's hydrating while not feeling heavy or greasy.

Check the chemical contain in your Skin care product Here

Please enter the Skin Care product name : [SimpleSkin](#)

Please Enter the NET Weight of the product in gram(g) : 450

Please enter the chemical contain in gram(g) :

1. Alcohol (g) : 43
2. Glucoside (g) : 13
3. Sodium Sulfate (g) : 35

Group '4' Sensitive Skin

Sypmtoms of the Sensitive Skin as :

- a) Your Skin is itchy
- b) You Feel Stinging and burning
- c) Your Skin is dry
- d) Get sunburn easily

The Skin care Consultancy advise for your Skin Problem :

- Cleanse your skin with micellar water
When it comes to sensitive skin, it's a good idea to stay away from foaming cleansers. Instead, try micellar water, a gentle, no-rinse cleansing option. Micellar water is powered by tiny micelles
- Never skip out on moisturizer.

While you may be nervous about layering on extra skin care products if you have sensitive skin, skipping out on moisturizer shouldn't be an option. Llightweight cream helps strengthen and repair skin barrier to help resist visible signs of aging that a weakened barrier can accentuate.

Subtopic: Hair

Le'touch Salon booking system

1. Identify the problem

What is hair? Hair is a protein filament that grows from follicles found in the dermis. Hair is one of the defining characteristics of mammals. The most common interest in hair is focused on hair growth, hair types, and hair care, but hair is also an important biomaterial primarily composed of protein, notably alpha-keratin. Hair also exists in a variety of textures. The three main aspects of hair texture are the curl pattern, volume, and consistency. There is a range of theories about the curl patterns of hair. Scientists have come to believe that the shape of the hair affects the curliness of the individual's hair. As the hair follicle shape determines curl pattern, the hair follicle size determines thickness. While the circumference of the hair follicle expands, so does the thickness of the hair follicle. An individual's hair volume, as a result, can be thin, normal, or thick. The consistency of hair can almost always be grouped into three categories: fine, medium, and coarse. This trait is determined by the hair follicle volume and the condition of the strand. Fine hair has the smallest circumference, coarse hair has the largest circumference, and medium hair is anywhere between the other two. Coarse hair has a more open cuticle than thin or medium hair causing it to be the most porous.

There are various systems that people use to classify their curl patterns. Being knowledgeable of an individual's hair type is a good start to knowing how to take care of one's hair. There is not just one method to discovering one's hair type. Additionally, it is possible, and quite normal to have more than one kind of hair type, for instance having a mixture of both. Type 1 is straight hair, which reflects the most sheen and also the most resilient hair of all of the hair types. It is hard to damage and immensely difficult to curl this hair texture. Because the sebum easily spreads from the scalp to the ends without curls or kinks interrupting its path, it is the oiliest hair texture of all. Type 2 is wavy hair, whose texture and sheen ranges somewhere between straight and curly hair. Wavy hair is also more likely to become frizzy than straight hair. While type A waves can easily alternate between straight and curly styles, type B and C Wavy hair is resistant to styling. Type 3 is curly hair known to have an S-shape. The curl pattern may resemble a lowercase "s", uppercase "S", or sometimes an uppercase "Z" or lowercase "z". This hair type is usually voluminous and damage-prone. Lack of proper care causes less defined curls.

Haircare is an overall term for hygiene and cosmetology involving the hair which grows from the human scalp, and to a lesser extent facial, pubic and other body hair. Haircare routines differ according to an individual's culture and the physical characteristics of one's hair. Hair may be coloured, trimmed, shaved, plucked or otherwise removed with treatments such as waxing, sugaring and threading. Haircare

services are offered in salons, barbershops and day spas, and products are available commercially for home use. Laser hair removal and electrolysis are also available, though these are provided (in the US) by licensed professionals in medical offices or speciality spas. Chemical alterations like perming, colouring can be carried out to change the perceived colour and texture of hair. All of these are temporary alterations because permanent alterations are not possible at this time. Chemical alteration of hair only affects the hair above the scalp; unless the hair roots are damaged, new hair will grow in with natural colour and texture. Hair colouring is the process of adding pigment to or removing pigment from the hair shaft. Hair colouring processes may be referred to as colouring or bleaching, depending on whether the pigment is being added or removed. Most permanent colour changes require that the cuticle of the hair be opened so the colour change can take place within the cuticle. This process, which uses chemicals to alter the structure of the hair, can damage the cuticle or internal structure of the hair, leaving it dry, weak, or prone to breakage. After the hair processing, the cuticle may not fully close, which results in coarse hair or an accelerated loss of pigment. Generally, the lighter the chosen colour from one's initial hair colour, the more damaged it may be. Other options for applying colour to hair besides chemical dyes include the use of such herbs as henna and indigo, or choosing ammonia-free solutions. Besides, Perms and relaxation using relaxer or thermal reconditioning involve chemical alteration of the internal structure of the hair to affect its curliness or straightness. Hair that has been subjected to the use of a permanent is weaker due to the application of chemicals and should be treated gently and with greater care than hair that isn't chemically altered.

There are also treatments of damage that we can do. The first one has split ends. Split ends, known formally as *trichoptilosis*, happen when the protective cuticle has been stripped away from the ends of hair fibres. This condition involves a longitudinal splitting of the hair fibre. Any chemical or physical trauma, such as heat that weathers the hair may eventually lead to split ends. Typically, the damaged hair fibre splits into two or three strands and the split maybe two to three centimetres in length. Split ends are most often observed in long hair but also occur in short hair that is not in good condition. The second one is breakage and other damage. Hair can be damaged by chemical exposure, prolonged or repeated heat exposure (as through the use of heat styling tools), and perming and straightening. Oil is harmful to rough hair and dry scalp as it decreases nourishment for hair leading to split and hair fall. When hair behaves unusually, or a scalp skin disorder arises, it is often necessary to visit not only a qualified physician, but sometimes a dermatologist, or a trichologist. Conditions that require this type of professional help include, but are not limited to, forms of alopecia, hair pulling/picking, hair that sticks straight out, black dots on the hair, and rashes or burns resulting from chemical processes. The gel provides a shiny look but dries the hair and makes it rough.

Most of us do not know how to treat our hair when the hair is damaged. Because of that, there is one place that we should visit when we want to get a treatment which is Hair salons. Hair salons provide men and women with services to clean, condition,

strengthen, cut, style and colour their hair. Opening a hair salon requires that you meet local, state and federal licensing and permit regulations, as well as registering your business as a legal entity, finding staff and marketing your salon. Some many hairstylists and hairdressers have a licence to treat our hair.

Based on the data that we get from the survey, most of the students do not have much time to care for their hair and for sure, it will make the student feel uncomfortable to face the other people in the crowd because sometimes, their hair becomes smelly and frizzy. This is a big reason why students should go to the salon and get treatment because it will make them feel better and less embarrassing in public. We believe that it is very important for students to take care of their hair, but because of the lack of time, the location of the salon is too far and sometimes, student needs to book an appointment manually. Because of that, many students are not putting enough effort into taking care of their hair. For sure, it will lead to many problems such as the dry scalp, damaged hair and so on. Because of these issues, the management comes out with an idea to develop a system and open a salon. This salon will provide many services such as hair treatment, haircut and many more. The price will be different between students and normal customers. Besides, customers do not have to worry anymore about the appointment because this system also provides a booking system online without the customer needing to go manually. Students will get a discount of 25% on weekdays and 30% on weekends. The system will provide a promotion during weekends which means a discount will be given when they get more than 3 services. Normal customers will get 30% and students will get 40% on weekends. The most interesting part of our salon is, customers can get the treatment at their home if they choose to book an appointment at home and a 15% discount also will be given to them. The system will also print out the receipt of booking which contains services that customers chose and the price to be paid. Free cancellation or extending the appointment due to an emergency can be made by using this system.

2. Understand the problem

- Required time to record the information manually
- Double the appointment or miswrite the dates for the appointment
- Difficult for the student to decide the treatment that they want
- Students feel uncomfortable facing other people
- The distance of salon that is far away from UUM
- Waste of time because students need to book an appointment manually
- The price of services in the salon is expensive
- Waste of money due to the cost of travelling to the salon
- Difficult for the students to cancel the appointment

- Price will be different between students, normal customers
- Student discount: 25% weekdays and 30% weekend
- Promotion on weekend (service \geq 3): students will get a 40% discount and the normal customer will get 30%
- Booking a treatment at home get a 15% discount

3. Identify alternative ways to solve the problem

- Need to use a book to record information data and appointments (date, time)
- hire more workers as customer service
- hire more workers to handle customers
- make templates, brochures or a system to show the package that the salon provided
- sort the information book by ascending order
- make a reminder for every appointment in a digital calendar
- make a system that can record data, book appointments online
- needs to double-check the appointment date and time
- need to remember the date and time for the appointment
- make a system which able to record customer's information and booking for an appointment

4. Select the best ways to solve the problem from the list of alternative solutions

- create a system that can record customer's information, book an appointment and can calculate the discount for students and normal customers

5. List the instructions(steps) that enable you to solve the problem using the selected solution.

- Customers need to fill up their information
- The system will list down services provided
- Customers need to choose whether they want to book for appointment or not
- Customers need to choose the service that they want
- Student discount: 25% weekdays and 30% weekend
- Promotion on weekend (service \geq 3): students will get a 40% discount and the normal customer will get 30%
- Booking a treatment at home get a 15% discount
- The system will print out the receipt as a confirmation after booking for an appointment

HAIRCUT			
HAIR CUT	MALE RM 30	FEMALE RM 40	CHILDREN RM 15
WASH+BLOW+CUT	MALE RM 45	FEMALE RM 55	CHILDREN RM 20
WASH & BLOW			
WASH + BLOW DRY			RM 25
WASH + BLOW CURL			RM 30
CHEMICAL WORK			
COLOURING ▪ Hair dyeing (changing hair colour)			RM 75
PERMING ▪ Creating waves or curls hair			RM 80
REBONDING ▪ Change hair's texture and create a smooth, straight hair			RM 90
RELAXING ▪ Reduces the curl			RM 80
TREATMENT			
SCALP TREATMENT ▪ For dry and itchy scalp			RM 100
RELAX TREATMENT ▪ Reduce curl, remove frizzy hair, control movement			RM 115
KERATIN TREATMENT ▪ Hair smoothing service ▪ Straightening hair			RM 150

Table 1 service provided by the salon

calculation

Normal customers	Weekdays & weekends - No discount	custprice= Total+servicefee
	- Weekdays: 25% discount	Dis1 = total1 – (total1*0.25) studentprice= Dis1+servicefee
	- Weekends: 30% discount	Dis2 = total2 – (total2*0.30) Studentprice1=Dis2+servicefee
BOTH	- Booking appointment at home	Totalhome= total3-(total3*0.15) Allprice = Totalhome+fee
	Normal customers: - (service>=3) gets 30% discount	Promo = total4-(total4*0.30) custprice1 = Promo +servicefee
	Students: - (service >=3) gets 40% discount	Promo1 = total5-(total5*0.40) Studentprice2 = Promo1 + servicefee

Table 2 calculation for discount and promotion

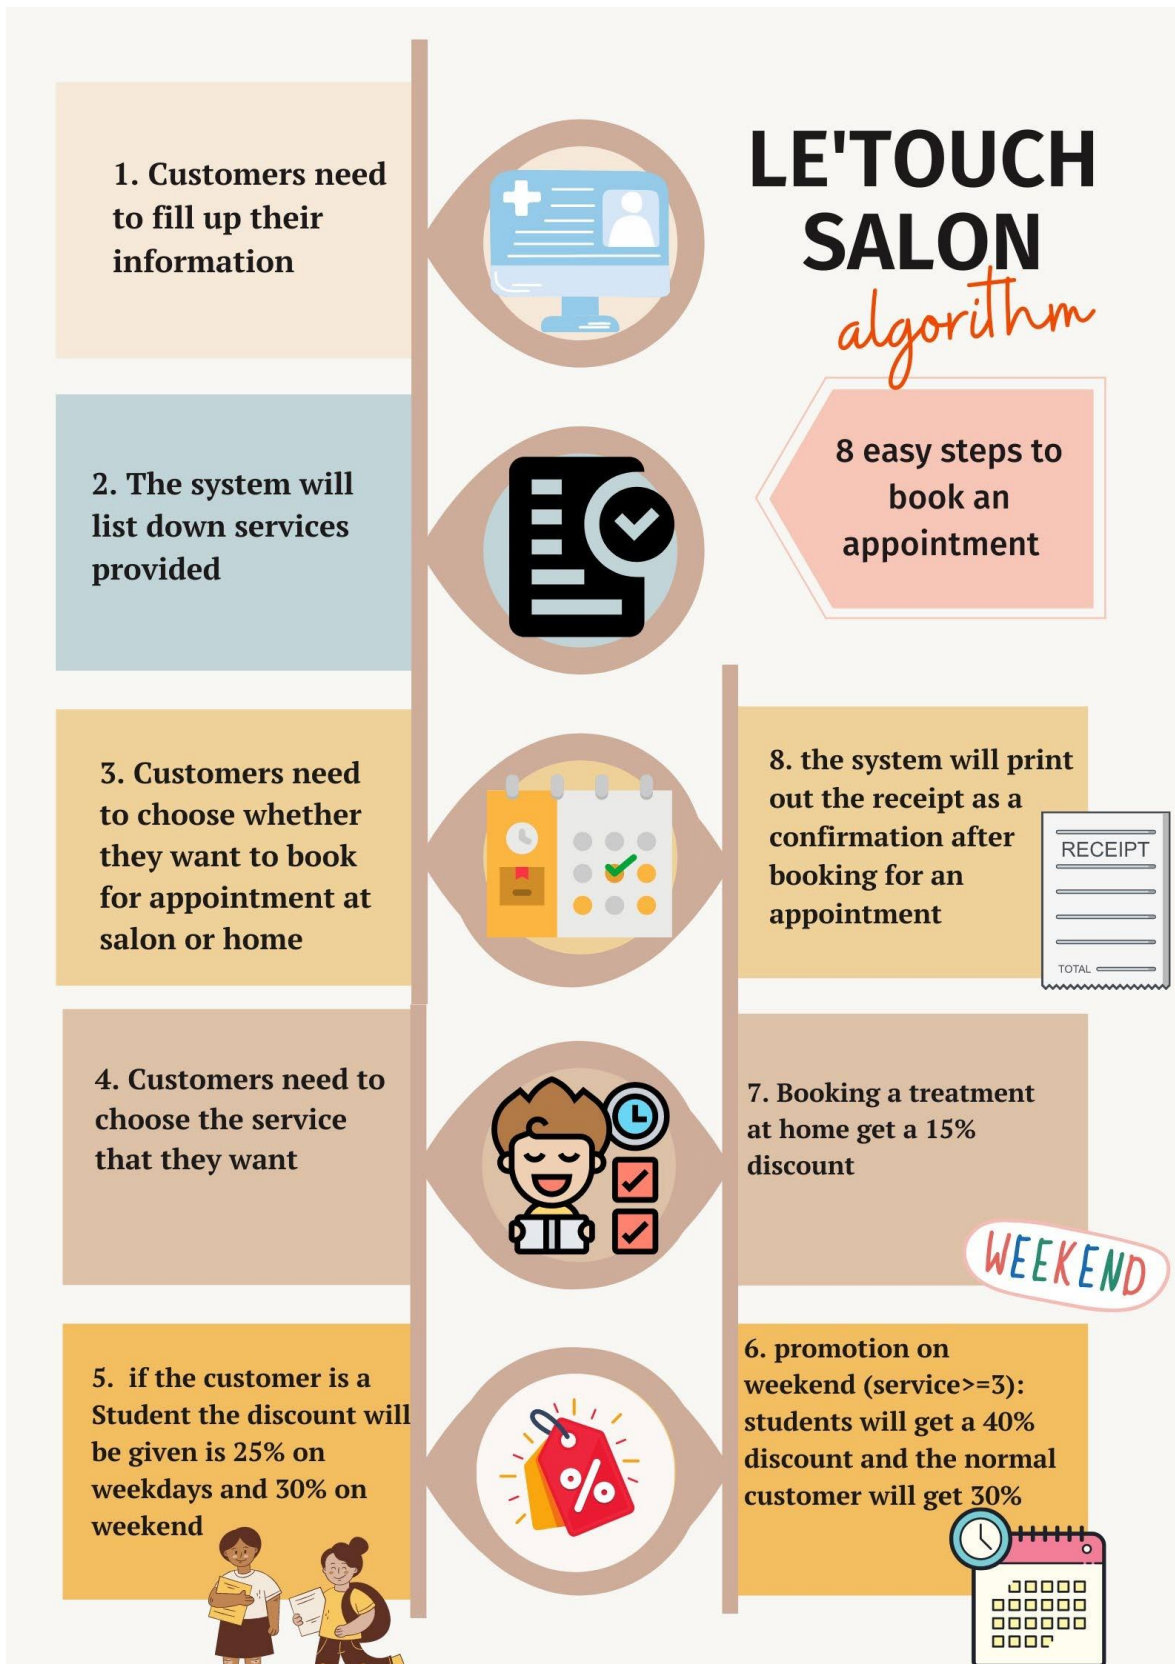

Allprice = total price to be paid after adding both service fee and total treatment after discount

Fee = fee for transportation + tools + distance

6. Evaluate the solution

- Systems online booking provided by Le'touch salon enables to help those students who did not have much time to go and book manually. Besides, students will feel more confident to face people when their hair look beautiful for non-Muslim, and for Muslim students, they will feel more comfortable wearing hijabs without having a hair problem such as damaged hair, itchy scalp and so on. Furthermore, by using these systems, it will lessen the mistake that humans could do for example miswriting dates and times for an appointment, do not answer calls when customers want to book an appointment and so on. Students can budget and save their money because this salon will be given a discount to a student which is on weekdays and weekend students will be given a 25% and 30% discount. There is also a promotion during weekends in which students will get a 40% discount and the normal customer will get 30% on weekends. The most interesting part of our salon is, customers can get the treatment at their home if they choose to book an appointment at home and a 15% discount also will be given to them. It will make things go easier for those customers who do not have transportations or another reason they can't go to the salon.
